New Product by Mazor Transforms Existing C-Arms into Intra-Operative 3D Imaging Systems

May 20 2008, Atlanta, USA and Caesarea, Israel, Mazor Surgical Technologies announced the introduction of the C-InSight™, a new innovative 3 Dimensional imaging system for the operating room. The C-InSight is an add-on software product to existing C-arms, converting the C-Arm into a 3 Dimensional imaging system. The C-InSight software is compatible with existing C-arms in operating rooms. The initial version of the C-InSight will be introduced at the SpineWeek congress taking place in Geneva, May 26 through 31st.

The C-InSight software answers the need for 3D images in the OR. The C-InSight is an affordable and simple solution which brings 3D technology into operating rooms without the need to purchase a new expensive device. Making 3D technology accessible and affordable intra-operatively will reduce the need for costly post-op CT scans for verification of surgical procedure results. This will also provide the surgeon with accurate intra-operative verification of implant placement, thus helping to reduce revision rates. Mazor anticipates to complete successful trials shortly and commercial product is expected by the end of 2008.

“We are pleased to report another significant development with the C-InSight system”, says Ori Hadomi, CEO of Mazor Surgical Technologies. “C-InSight is a real breakthrough. Mazor is committed to reduce radiation involved in orthopedic surgery, to save time and minimize invasiveness. We believe that C-InSight, together with our other products bring real solutions to spine and general orthopedic surgeons and patients.”

The early version of the C-InSight will be introduced at the SpineWeek in Geneva (Booth #1610) along with Mazor’s flagship product the SpineAssist®, the miniature robotic device for guidance and positioning in various spine procedures.

About Mazor Surgical Technologies

Mazor Surgical Technologies is a medical device company focused on the development and marketing of miniature robotics, imaging and spinal implant products for orthopedic procedures. The Company's current main product offering includes a miniature robotic device called SpineAssist, as well as a new spinal implant called GO-LIF, still underdevelopment for a unique surgical approach to spinal fusion. The SpineAssist is commercially available in the USA, Germany and Israel. Mazor is headquartered in Caesarea, Israel, with offices in Atlanta, USA. Please visit www.mazorst.com for more information.
